

WORKING OF THE PROJECT

1. We have set up two virtual networks for the project. Namely:-

2. We used OPENVPN TAP Adapter for TAP Adapter, Tap windows adapter is a special network driver that enables VPN providers to facilitate to a VPN connection to their servers.
3. We used OPENSLL libraries for encryption process and created the header file AES.h for the header file.
4. We even tracked the packet receiving and sending in using wireshark .
